

NEWCOMER

— ARMS —

COMPANY PROFILE

Newcomer Arms, LLC

About Newcomer Arms

Newcomer Arms specializes in the development of vanguard technologies and challenging acquisitions, bringing a heritage of innovation to every project.

Established in 1999, Newcomer quickly found its niche position in the procurement of civilian rifles and shotguns. Gearing operations towards bespoke arms acquired from global sources, Newcomer Arms quickly built a network of suppliers and international connections.

While Newcomer continues to thrive in the luxury and sophistication revolving around the trade of hand-crafted civilian firearms, they noticed the increasing demand for innovative technologies and the training they require.

The founders of Newcomer Arms are active within every transaction, ensuring that its clients receive equipment, technology, and training that are tailored to fit their exact situations. Newcomer carries a legacy of being nonpareil in the procurement of bespoke rifles and shotguns, while always incorporating cutting edge technology and tactical advancements into its force of military and defense equipment.

Through years of experience and building a qualified team of specialists, Newcomer Arms has entered the defense and technology sector in full-force. Investing heavily in network construction and revolutionary developments, Newcomer is able to bridge the gap between proven tradition, technology, and training.

Mission

Newcomer's immediate mission focuses on our International Expansion Project. Within the fiscal year of 2018, Newcomer plans to be a dominant entity in the supply of defense equipment and technologies to the Gulf region in collaboration with United States efforts towards a secure world. Introducing our U.S. based manufacturing division, by July of 2018 we will be exporting both military and civilian products around the globe.

Newcomer Arms invests heavily in the future, but not only in technology and products. Newcomer proudly supports and defends the environment during the turmoil and struggles the world is currently experiencing. In partnership with the Newcomer Conservation and Humanitarian Fund, Newcomer Arms is able to supply Anti-Poaching Units in Eastern and Southern Africa with the tools, training, and equipment necessary to combat wildlife trafficking. With population numbers rapidly decreasing, we are actively looking for new and innovative ways to defend species such as the Black Rhino and African Elephant. Newcomer is also looking for local partnerships across the poacher-threatened territories of Africa for us to provide training and support.

Licensed Products

Newcomer Arms

1. NCA 3D
 - a. A fully interactive, three dimensional, augmented reality capable, mechanical training and execution software manual that is fully adaptable to any piece of equipment.
2. Mobile Device Mount
 - a. wrist or arm-mount cuff assembly that enables ready, hands-free access to communication devices and other tools
3. Ruck Dock
 - a. a load carriage connector system designed to enable rapid mounting and demounting of personal load bearing equipment.
4. HATS - Hardened Alternative Trailer System
 - a. standardized, rapidly deployable structure for protective use in areas subject to ballistic, blast and forced entry threats
5. Modular Protection System - Ground Tower
 - a. a lightweight, rapidly constructed guard tower system for expedient deployment in remote locations with protection against small arms and blast threats.
6. WASP
 - a. a man-portable, adaptable and integrated reverse osmosis (RO) water purification, with electro- chlorination, UV sanitation, and a remote water monitoring capability.
7. IREPS Protective Mask
 - a. scarf like mask that protects personnel against riot control agents.
8. Auto Belay Insertion System
 - a. System for descending a fast rope that increases safety, accommodates individuals wearing a heavy pack, and speeds ground deployment time.
9. Blast Debris Protective Harness
 - a. a lower torso and extremity blast protection garment that provides increased coverage, improved mobility and enhanced comfort.
10. Multiple Bundle Sling Load System
 - a. Payload delivery system that maximizes the equipment volume of the payload that can be used for transport up to the maximum aircraft weight capacity, and offers the ability to selectively target the release of a particular payload.
11. Shotgun Shell with Configurable Shot Patterns
 - a. Configured shot pattern can be tailored for a number of mission, tactical, sporting, and hunting applications.
12. Armor Curtain
 - a. A lightweight and universal answer to additional protection for field operation.
13. Brighter and Safer Grenade
 - a. An innovative flash-bang grenade that is more than eight times brighter than the currently fielded M84 stun grenade and temporarily incapacitates targets with flash blindness lasting three to five times longer.
14. Anti-Swimmer Grenade
 - a. A depth activated, hand emplaced ordnance utilizing safe arm technology to address underwater threats (such as enemy swimmers) while providing a safe interface with personnel.
15. Flexible Body Armor
 - a. Fabric-like material fits loose and is 2 pounds lighter than equivalent existing armor.
16. Selective Camera Jamming
 - a. Security and privacy protection from cameras and related optical and transmittal devices.
17. Fast Rope
 - a. A specialized rope for descending from a helicopter or elevated platform that is resistant to wind and rotor downwash, suited for fast-roping to small targets such as roofs and boats.
18. Remote Human Detection
 - a. Using radio waves, the RHD detects resonant frequencies inherent in the human body and incorporates unique processes to minimize false alarms.

Please reference our **Licensed Products Guide** for detailed information.

Solutions

Newcomer prides itself on the ability to provide everything and anything to its clients. The cliché marketing phrase of a “One Stop Shop” can be considered a bespoke slogan for Newcomer Defense. Offering a wide array of U.S. made military and civilian products, in-depth training in all areas of defense and combat, and holding expertise in international challenging procurement projects, Newcomer is situated in the focal point of any defense or outdoorsman market demand.

Acquisitions - Products and supplies are the key to military supremacy with the right training, and software is the underappreciated component to a successful defense organization. From mobile cloud computing and communications technologies to large scale defense structures to complete fleets of aircraft, Newcomer has the resources and ability to acquire, deliver, and maintain any defense demand. Our services do not stop at the deal, but continues on through a prideful after-sales service and maintenance curriculum.

- i. With strategic partnerships with corporations such as McDonnell Douglas and Textron (Cessna), Newcomer is able to provide expedited resources in emergency situations. We work hard to always maintain a fleet of our featured model avionics in the case of an urgent acquisition request. This allows us to be prepared for any clients demands in the minimal amount of time.
- ii. For land and off-road operations, Newcomer is featuring Oshkosh special purpose vehicles to operate in any and all conditions.
- iii. Newcomer Arms supplies and installs structures from companies such as Sprung Structures. There is no one-size-fits-all when it comes to specific field operational requirements. In response, Newcomer employs an educated and knowledgeable staff that is available 24/7 to discuss details and requirements of our client’s situations. Structures that feature security, efficient assembly and provide special purpose are vital in providing turn-key solutions to contractors and governments.

Technology – Staying ahead of the competition is not only a market strategy, but in our line of work, its required for survival. Advancements in technology allow us to make mission environments safer, and better equip mission leaders and teams for the variables they may encounter. Working closely with our Consultancy Departments, our ever-accelerating Technology teams are on the leading edge of our client’s critical needs. This relationship between client and supplier has proven crucial during countless operations and projects.

- i. The future of warfare is intelligence, but intelligence does not end with what you know about the enemy. Intelligence cycles back to your team’s knowledge of your own equipment. NCA 3D allows field operators to repair damaged machinery and equipment with no prior knowledge of how to do so. This ability is critical in hot-zone situations and emergencies. Details of NCA 3D can be found in the [2018 Licensed Products Guide](#).

Training – Technology and equipment advancements hit the market every day. By pairing these advancements with the training they require, Newcomer is able to offer a full line of civilian and military needs. Newcomer Arms employs ex-military personnel and provides access to the global market. Our experts travel the world educating and training civilians, Park Rangers, and military personnel on safety, survival, and tactical procedures. We are currently establishing India’s first private-sector flight school for both helicopters and small aircraft.

- i. Newcomer Arms offers training programs in, but not limited to;
 - a. Special Police Officer Training
 - b. Investigative Training
 - c. Combative/Dynamic Firearms Training
 - d. Fire & Rescue Training
 - e. Advanced Tactics/Techniques/Procedures (TTP)
 - f. Sniper/Counter Sniper Training
 - g. Counter Terrorism Operations
 - h. Advanced Urban Combat
 - i. Linear Assaults
 - j. Advanced Combat Marksmanship
 - k. Target Acquisition/Reconnaissance/Intelligence
 - l. Security and Stability Operations (SASO) including Humanitarian Aid
 - m. Personal Security Detail
 - n. High-Desert Mountain Operations
 - o. Tactical Breaching, Driving Track/Off-Road
 - p. K9 Implementation Tier 1 Military Work Dogs (MWD)

Vision

Much as our Mission suggests, Newcomer has a broad and strong outlook on the future of the defense industry. In recent years, a severe disconnect between private sector companies and the public has formed. Newcomer seeks to bridge this gap this by introducing a fresh vision to the industry. Using our products, we will enact programs focused on the education and training of tomorrow's industry professionals. These ideals are the objective of Newcomer's Reach Out program, to be released in 2019, which empowers young individuals to explore their abilities in current research and development projects. By enabling today's youth, we are investing in tomorrow's executives.
